Technical Skills

Programming	<u>Python, SQL, OOPs</u>
Data Analysis & Visualization	<u>Pandas, NumPy, Power BI, Matplotlib</u>
Machine Learning	<u>Scikit-learn, RapidMiner</u>
Databases	<u>PostgreSQL, MySQL</u>
Tools & Platforms	<u>IBM BPM, Git</u>
Core Concepts	<u>Data Analysis, ETL, Data Cleaning, EDA</u>

Experience

Ingenero Technologies – Data Analyst (Intern)

Mumbai, India
Aug 2025 – Present

- Analyzed large-scale **business and operational data** for **petroleum, gas, and energy sector clients** using **Microsoft SQL Server** and **Python**, enabling data-driven decision making.
- Developed and optimized **complex SQL queries, stored procedures, and views** to support **data pipelines** and seamless workflow integrations.
- Designed and implemented **end-to-end workflows in IBM BPM**, automating critical business processes and improving system efficiency.
- Performed **data cleaning, transformation, and exploratory data analysis (EDA)** using **RapidMiner** for advanced analytics use cases.
- Collaborated with cross-functional teams to deliver **process optimization solutions** and improve data accuracy across enterprise systems.

Projects

Business Process Automation & Analytics Platform – Data Analyst

- Worked on enterprise-scale internal applications focused on automating business workflows and improving operational efficiency for petrochemical and industrial plants.
- Designed and automated end-to-end workflows using **IBM BPM** to support operational processes across multiple plants.
- Developed and optimized **Microsoft SQL Server** queries and stored procedures for workflow execution and reporting.
- Performed data analysis and model evaluation using **Python** and **RapidMiner** to support process improvements.
- Integrated **Power BI dashboards** to visualize workflow status, plant-level KPIs, and model performance outputs for stakeholders.

GreenDrive Analytics — EV Sustainability and BI Platform

GitHub

- Engineered an EV sustainability and business intelligence platform using (**Python, SQL, PostgreSQL, Power BI, and Prophet**) to analyze EV adoption, TCO savings, carbon reduction, and infrastructure trends across India.
- Designed a PostgreSQL STAR-schema data warehouse and developed ETL pipelines processing 20K+ records using Python and SQLAlchemy.
- Implemented Prophet-based forecasting models to predict EV growth and infrastructure demand till 2030.
- Created interactive Power BI dashboards using DAX, data modeling, and business KPIs to deliver executive-level insights and decision-making support.

Sales Performance Dashboard – Power BI

GitHub

- Constructed a real-time sales dashboard using **SQL** for data extraction and **Power BI** for visualization, tracking performance across 100+ products.
- Formulated SQL queries to process and analyze over 1 million records, improving data accuracy by 20 Percent.

- Designed an interactive Power BI dashboard, enabling the monitoring of sales trends, regional performance, and product profitability for 5+ regions.
- Designed an interactive Power BI dashboard, enabling the monitoring of sales trends, regional performance, and product profitability for 5+ regions.

Generated insights that increased sales decision-making efficiency by 25
Constructed a real-time sales dashboard using SQL for data extraction and Power BI for visualization, tracking performance across 100+ products.

Education

Acropolis Institute of Technology and Research, Indore (2025)

Bachelor of Technology, Computer Science (Data Science)

Achievements

- Actively participated in multiple **national-level hackathons**, enhancing problem-solving, innovation, and teamwork skills.
- Served as a **core team member** of the Data Science and Analytics Club, organizing events and contributing to analytics-driven initiatives.
- Developed expertise in **Data Analysis, Machine Learning, and SQL** through academic and project-based work.
